PROFILE SUMMARY

Final-year BCA student and aspiring Backend Developer & Data Analyst with hands-on experience building full-stack applications in Python and JavaScript. Built 3 projects spanning student record management, AI-based career guidance, and AI-powered cyber threat detection, including containerizing an application with Docker. Completed 7 certifications in Python, Data Analytics, and Machine Learning, and won 1 hackathon. Looking for an entry-level role in Backend Development or Data Analytics to keep learning and grow.

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Java, Python, JavaScript
- **Backend & APIs:** Node.js, FastAPI, REST APIs, Backend Web Development
- **Databases:** MySQL, PostgreSQL, MongoDB, Database Management Systems (DBMS)
- **Web Technologies:** HTML, CSS
- **Tools & DevOps:** Git, GitHub, VS Code, Docker
- **Concepts:** Data Structures & Algorithms (DSA)

PROJECTS

AetherGuard AI (formerly ThreatLens AI) | Team Project | [GitHub](#)

- Built an AI-powered cyber threat detection and investigation platform that ingests security logs (CSV, JSON, TXT) and produces a dashboard and reports.
- Applied Isolation Forest for anomaly detection and classified threats such as Brute Force, Port Scanning, Abnormal Login, DoS-like Patterns, and Suspicious IP Behaviour.
- Added a Risk Engine for risk scoring and an Explainable AI feature so analysts can see why an event was flagged.
- Developed with IBM Bob 2.0 as AI development partner; research based on NIST, MITRE ATT&CK, and the CIC-IDS2017 dataset.

Student Management System | [GitHub](#)

- Developed a full-stack application to manage student records with add, edit, delete, and search functionality.
- Applied core database concepts to structure and efficiently store and retrieve student data.
- Built using JavaScript, Python, HTML, and CSS, with a focus on clean, functional design for reliable record management.

AI-Based Student Career Guidance System | [GitHub](#)

- Built a system that guides students toward suitable career paths using AI-based recommendations.
- Combined backend logic with data-driven suggestions to deliver a personalized user experience.
- Containerized the application using Docker for consistent, portable deployment.
- Built using Python, JavaScript, HTML, CSS, and Docker.

ACHIEVEMENTS

- **1st Place, Code Quest 2026** (Coding Club, SOIT, IMS Noida): Part of Team Algorithm Hunters, which secured 1st position among competing teams across multiple rounds including MCQs, reverse coding challenges, and a technical treasure hunt.

CERTIFICATIONS

- IBM Bob 2.0 Hackathon, Certificate of Completion: LabLab.ai / NativelyAI, Sep 2026
- Data Analysis with Python: IBM / Cognitive Class, Dec 2025
- Data Analytics Career for Non-Tech Backgrounds: WsCube Tech, Mar 2026
- Basics of Machine Learning Algorithms: UniAthena, in partnership with Cambridge International (CIQ UK), Jul 2026
- Basics of Python: UniAthena, in partnership with Cambridge International (CIQ UK), Apr 2026
- Excel Skill Certification: OneRoadmap, Sep 2025
- CSS Skill Certification: OneRoadmap, Sep 2025

EDUCATION

Institute of Management Studies, Noida: BCA | 6.7 CGPA
